Amdt date March 14, 2007

Amendments to the Abstract:

Please amend the Abstract as follows:

A device for the storage of at least one of solid and liquid and/or gaseous objects, in particular, of medicaments or foodstuffs, comprising. The device including at least one compartment ~~which contains~~that is configured to contain at least one object. The filling or emptying of the compartment is ~~triggered by~~triggers an electrically-readable signal. In a ~~preferred one~~ embodiment, the compartment, ~~for emptying of or filling with the object,~~ may be mechanically modified and an electrically-readable signal is generated based on a corresponding mechanical change to the compartment taking place. Preferably integrated in the device, are an. An electrical data memory with at least one memory cell, ~~allocated to a compartment, which, on a mechanical change to the compartment, adopts a different memory value and is integrated into the device.~~ The memory cell is assigned to the compartment and is configured to adopt a value corresponding to the mechanical change to the compartment. The device also includes an analytical circuit for reading ~~off~~ the data memory.
